

IBLSPL1200 – 12" High Performance Heated Roll Laminator

This 12" wide machine is possibly the fastest 110V 12" laminator in existence. While producing a superb finish and edge seal it is capable of speeds up to 17 fpm and can laminate 3 mil material in excess of 10 fpm. It can use films from 1 to 15 mils thick and will laminate materials, such as foam board to 1/4" thick. With a set up time of a couple of minutes and a thru-put capability in excess of 1000 fph extremely profitable productivity can be expected. The IBLSPL1200 is simply a 12" wide high performance commercial laminating machine. This machine fills the gap between "toys" and expensive commercial laminators, while sacrificing nothing in quality and performance. This is truly a professional machine in every aspect. And remember, simply turn it on when you need--warm up time is about four minutes on this little guy. Also, remember that the vast majority of all printing, copying, and duplicating machinery does not process output that exceeds 12" in one dimension--and that vast majority of laminating films sold are less than 12" in width as well. Actually, the only thing little about the IBLSPL1200 is its price.

Features

- 12" wide Laminator
- 3 1/2 minute warm up
- Laminates 1-10 mil /one side or two
- Lightening quick, sustainable thermal response
- Variable speed control, reversible
- Laminates/mounts to 1/4" thick
- Affordable priced
- 12"dia.+ film roll capacity
- Digital temperature read out
- Cooling fans (one set standard)
- Ultra duty welded steel stand standard
- Exclusive micro adjustable slitter assembly
- The industry's most affordable professional grade laminating machinery
